Continuous Monitoring Data Comments

This report provides a summary of data collected at Continuous Air Monitoring Stations (CAMS) operated by the Texas Air Control Board during 1984. A separate report summarizes 24-hour sampling results for total suspended particulate.

The symbol "●" is used to indicate that a set of data does not meet the Environmental Protection Agency's criteria (75% data return) for calculating an annual mean. Annual ambient air quality standards exist for nitrogen dioxide and sulfur dioxide.

Substantial effort has been made to insure the validity of the values developed from the CAMS system. Detailed information concerning station design, instrument configuration, data validation and quality assurance procedures may be obtained from the Quality Assurance or Ambient Monitoring Divisions of the Texas Air Control Board, 6330 Hwy. 290 East, Austin, Texas 78723.

Ambient Air Quality Standards

| <u>National Standards</u> | <u>Primary</u> ¹ | <u>Secondary</u> ² |
|---------------------------------------|---|---|
| Carbon Monoxide (CO) | 35 ppm hourly average, not to be exceeded more than once a year | same as primary |
| | 9 ppm eight-hour average, not to be exceeded more than once a year | |
| Nitrogen Dioxide (NO ₂) | 0.05 ppm annual average | same as primary |
| Ozone (O ₃) | 0.12 ppm hourly average, not to be exceeded for an average of more than one day for a three year period | same as primary |
| Total Suspended Particulate Matter | 260 µg/m ³ 24-hour average not to be exceeded more than once a year | 150 µg/m ³ 24-hour average, not to be exceeded more than once a year |
| | 75 µg/m ³ annual geometric mean | 60 µg/m ³ annual geometric mean |
| Sulfur Dioxide (SO ₂) | 365 µg/m ³ (0.14 ppm) 24-hour average, not to be exceeded more than once a year | 1,300 µg/m ³ (0.5 ppm) three hour average, not to be exceeded more than once a year |
| | 80 µg/m ³ (0.03 ppm) annual average | |

¹ Primary standards define levels of air quality which the U.S. Environmental Protection Agency's (EPA) Administrator judges necessary to protect the public health with an adequate margin of safety.

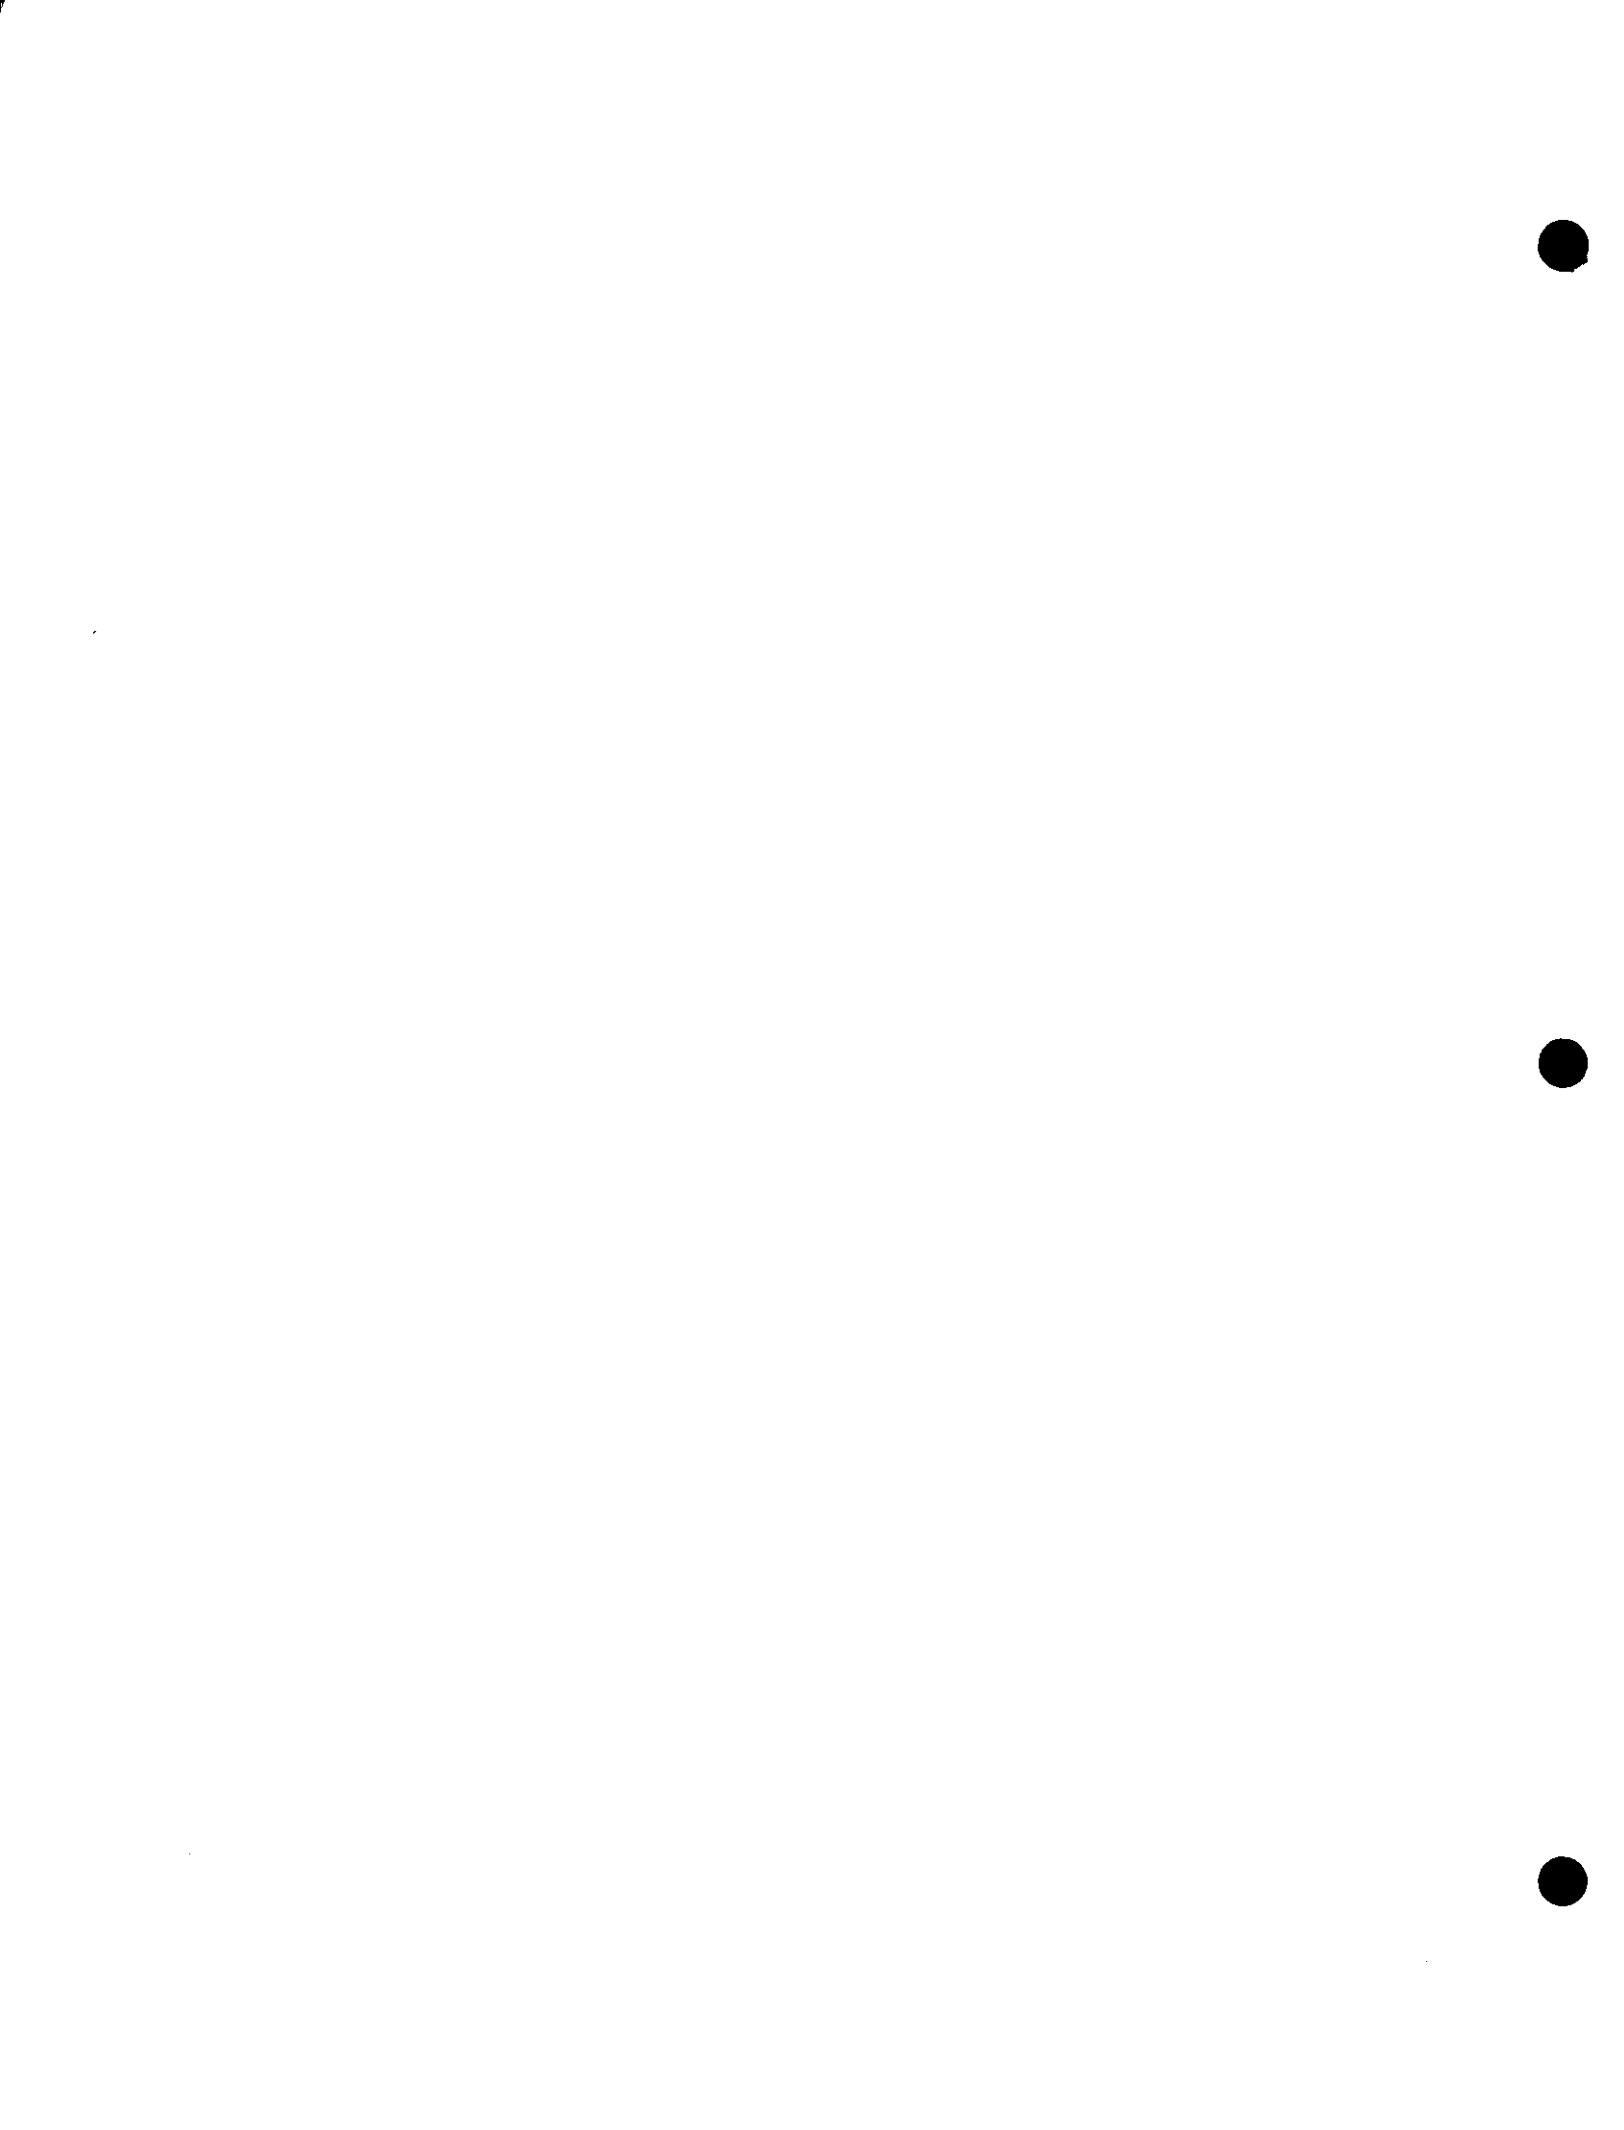

² Secondary standards define levels of air quality which the EPA Administrator judges necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

SUMMARY OF 1984 CAMS DATA COMPARED WITH AMBIENT STANDARDS

| Air Quality Control Region Number | Station Location | CAMS Number | Ozone Second-Highest Hour | Number of Days with Ozone > 0.12 ppm in 1984 | Carbon Monoxide 2nd Highest Hour | Carbon Monoxide 2nd Highest 8-Hours (Nonoverlapping) | Sulfur Dioxide 2nd Highest 24-Hours | Sulfur Dioxide Annual Mean | Sulfur Dioxide 2nd Highest 3-Hours (Nonoverlapping) | Nitrogen Dioxide Annual Mean |
|--------------------------------------|--|-------------|------------------------------|--|-------------------------------------|--|--|-------------------------------|---|---------------------------------|
| | Maximum Allowable by Ambient Air Standards (parts per million) | | 0.12 | 1 Day Average For 3 Yr | 35 | 9 | 0.14 | 0.03 | 0.5 | 0.05 |

TABLE OF OZONE EXCEEDANCES

The following table indicates for each site how many days that had at least one hour exceeding the ozone standard of 0.12 ppm. Local program monitors are included in this Table, but are not presented in the detailed summaries which follow. To violate the ozone standard, a site must average more than one daily exceedance for a three year period.

REVISED 7/2/85

VIOLATION COUNTS ARE FOR THE ENTIRE YEAR. THE SYMBOLS (*) AND (+) ARE DEFINED AS FOLLOWS: IF NO SYMBOL-GREATER THAN 75% DATA RETURN FOR THE "OZONE SEASON". * INDICATES BETWEEN 75% AND 50% DATA RETURN FOR THE "OZONE SEASON". + INDICATES LESS THAN 50% DATA RETURN FOR THE "OZONE SEASON". THE "OZONE SEASON" USED FOR THIS TABLE WAS APRIL THROUGH SEPTEMBER.

LOCAL PROGRAM SITES DO NOT HAVE A CAMS NUMBER SHOWN.
IF YOU HAVE QUESTIONS ON THIS CHART, CONTACT LARRY BUTTS, DATA MANAGEMENT.

TOTAL NUMBER OF HOURS 8301

Agency Accuracy

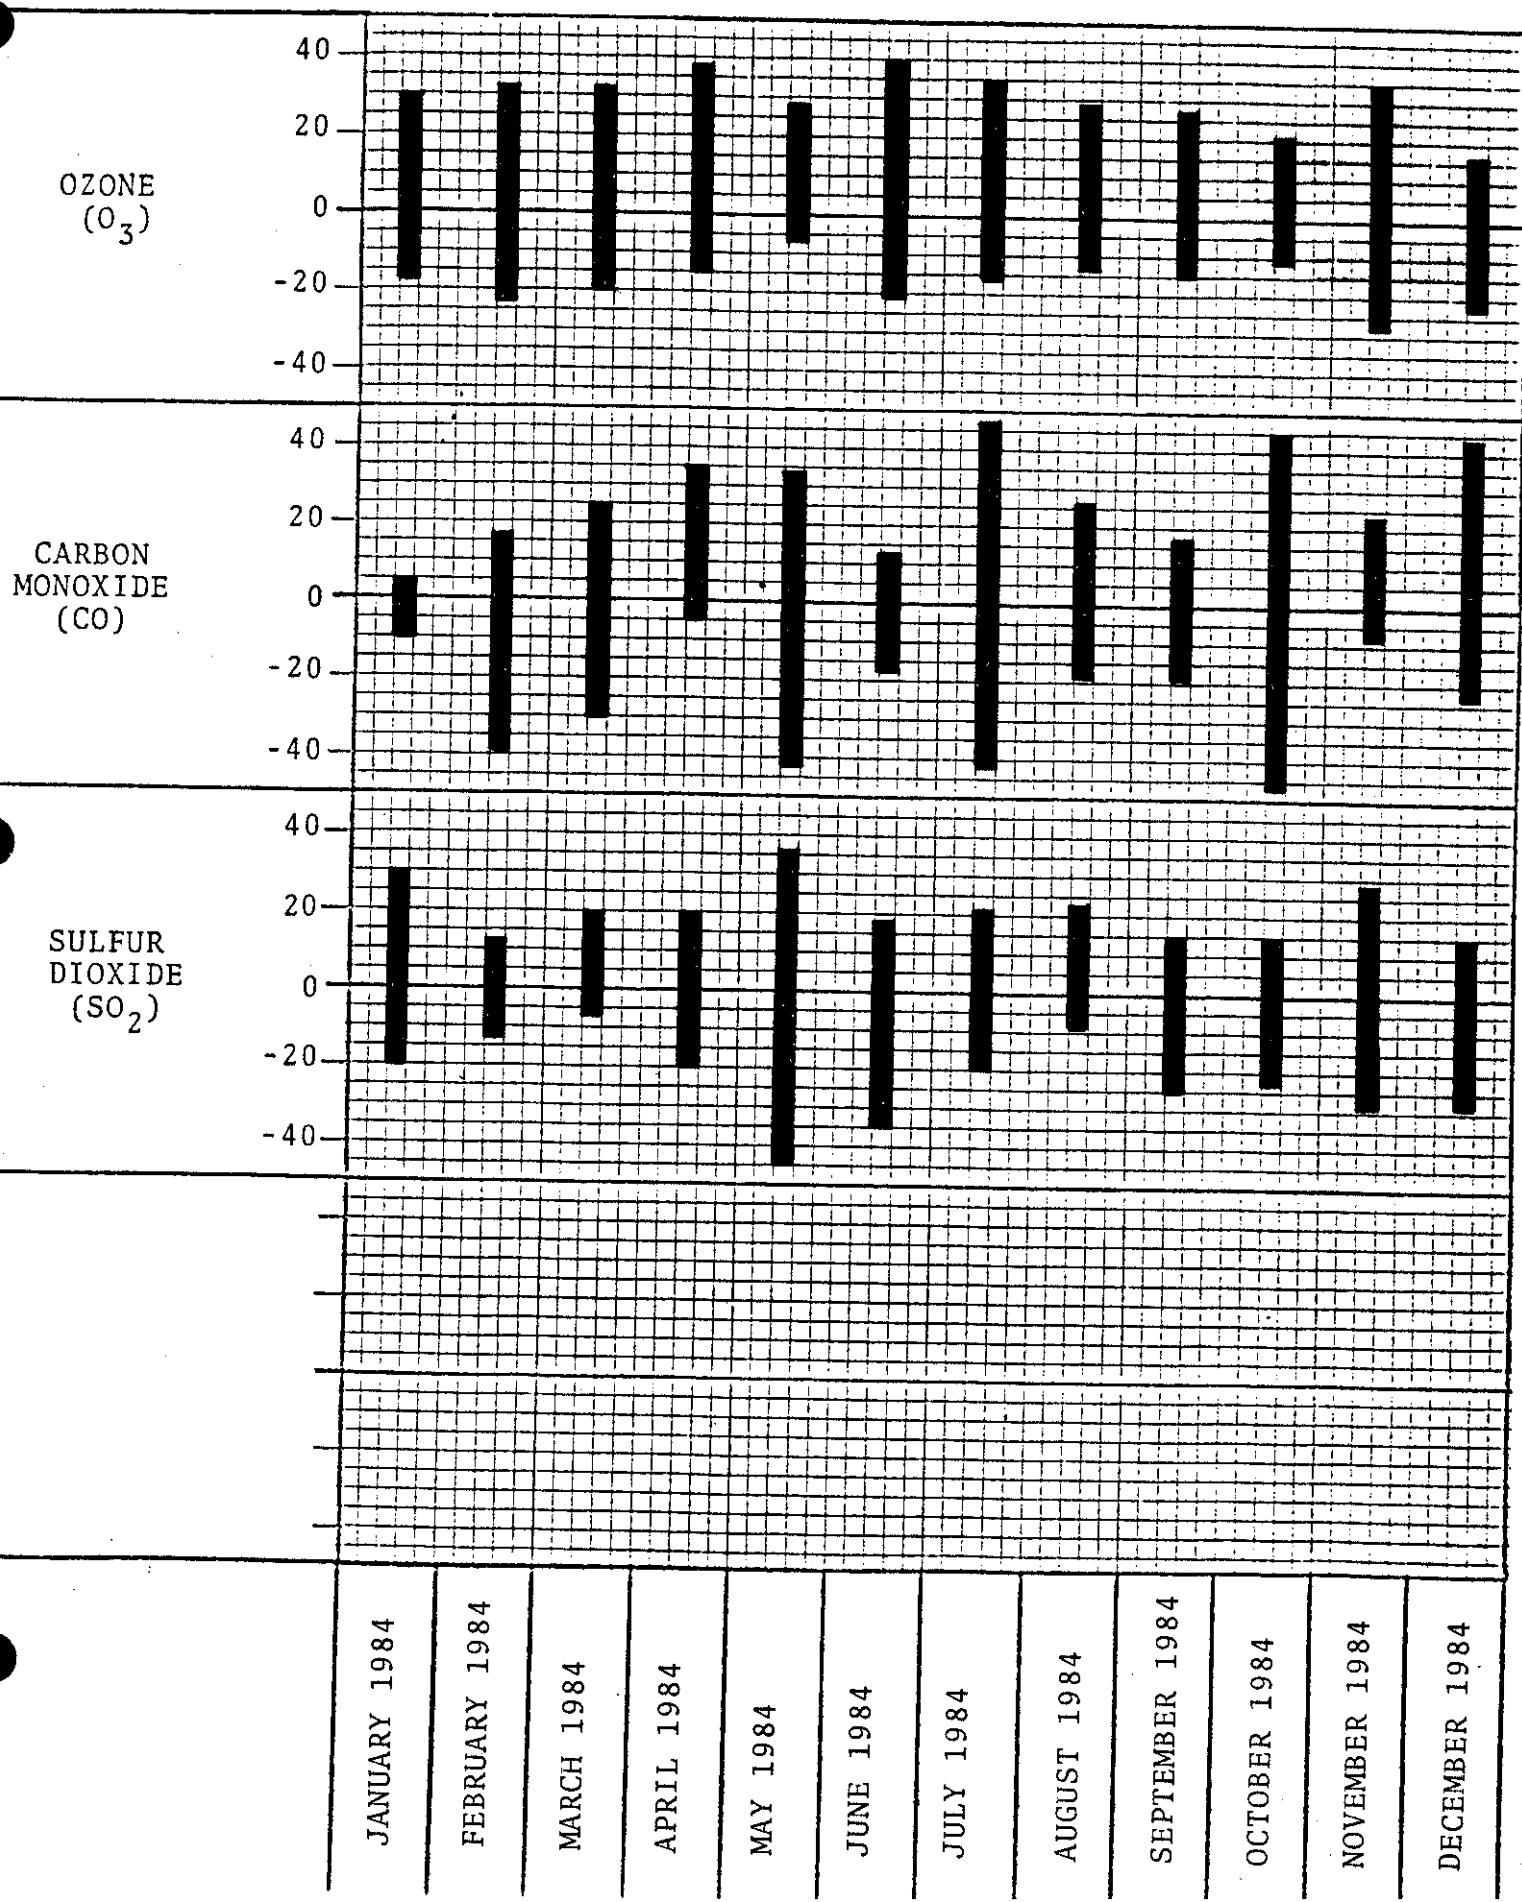

The CAMS Network accuracy is calculated based on low-level instrument audits. The following parameters are monitored: Ozone, Carbon Monoxide, Sulfur Dioxide, Nitric Oxide, Nitrogen Dioxide, and Total Oxides of Nitrogen.

The NCAMS Network accuracy is calculated based on the Hi-Vol flow audits. Total suspended particulates is the pollutant monitored.

The 95% Probability Limits indicate the interval within which the percent difference between the measured value and the true (audit) value should fall 95% of the time.

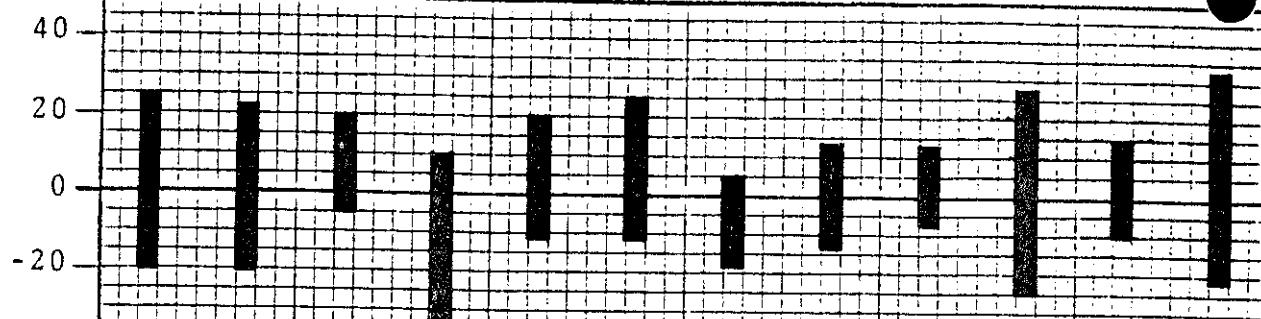

The following bar graphs are representations of the above-mentioned 95% probability limits.

Agency Precision

In January, 1981, the Agency started making precision measurements on the continuous monitors in the CAMS Network as required by Federal Regulations. These measurements consist of challenging the monitors at least once every two weeks with a known concentration of pollutant gas and reporting each monitor's calibrated response as a percent difference from the known concentration. These measurements are then processed into 95% probability limits which indicate the interval within which the percent difference should fall 95% of the time. The parameters monitored are as follows: Ozone, Carbon Monoxide, Sulfur Dioxide, Nitric Oxide, Nitrogen Dioxide, and Total Oxides of Nitrogen.

The following bar graphs are representations of the above-mentioned 95% probability limits.
