Foreword

During the first thirty-five years of its publication, the TEXAS BUSINESS REVIEW was not indexed. However, to meet the growing need for a systemized record of special articles and their authors, as well as formalized access to the diverse information in the monthly columns, Mrs. Elizabeth Turpin, a research associate on the staff of the Bureau of Business Research, has compiled A CLASSIFIED AND SELECTIVE INDEX TO THE TEXAS BUSINESS REVIEW, 1927-1961.

In subsequent years, the REVIEW will be indexed for each year, with the index bound with the December issue.

Mrs. Turpin was assisted in the preparation of the manuscript for publication by Linda Beard, Tim Duffee, Florence Escott, Mrs. Juanita Hammons, Josephine Knippa, and Mrs. Margaret Smith. The cover was designed by Ellen Watson, and offset printing was done by Robert Dorsett and Daniel Rosas.

II. AUTHOR INDEX	109

Note: For added convenience in locating related material, cross references to other sections are listed after each entry in the table of contents. (A = Articles, B = Reports, C = Columns; references to the Miscellaneous section occur only under A: 4; numbers and lower case alphabet refer to the corresponding enumeration for subsections in both the text and the table of contents.)

How to Use the Index

ARRANGEMENT OF THE INDEX

The index has been divided into two parts: (1) A subject index lists and classifies and/or abstracts selected items, and (2) an author index lists authors alphabetically and gives the dates of publication (months and years) for all signed contributions to the REVIEW.

CROSS REFERENCES

For added convenience in locating related material, cross references to other sections in the index are listed after each entry in the table of contents, as shown below:

12. Retail Trade and Marketing 23
(A: 7,12,13; B: 1b,c,7,11,12; C: 1e,2,8,9)

A = Articles, B = Reports, C = Columns; references to the Miscellaneous section (D) occur only under the history subsection; numbers and lower case alphabet refer to the corresponding enumeration for subsections in both the text and the table of contents. No subject cross references are made from the author index to the subject index or vice versa; the author index does, however, list all articles and reports for each author by title and date and also cites the columns written by an author as well as his contributions to the Miscellaneous section, if any.

SUBJECT INDEX

ARRANGEMENT

The subject index is divided into the following four categories: (1) articles, (2) reports, (3) monthly columns, and (4) miscellaneous. Each of the first three categories has been subdivided into subject classifications listed alphabetically, with the entries (either titles or abstracts) listed chronologically within each subject grouping. The miscellaneous grouping has been arranged chronologically without additional subdivision.

FORMAT

The following marks of punctuation have been given specific meaning in the subject index, as shown below:

- " " --Quotation marks are used to enclose (1) titles of articles or reports, (2) subheadings under the column section, (3) titles of pamphlets, etc.
- () --Parentheses are used (1) to enclose subheadings in articles and reports where they are included following the title in quotation marks, (2) to enclose auxiliary information or subtitles following a title in quotation marks, (3) in the usual manner to enclose parenthetical statements (usually where no quoted titles are present), and (4) to enclose the author's name and column title or classification at the end of an entry.
- [] --Brackets are used to enclose (1) editorial additions, such as classifications, abstracted headings, etc., and (2) the author's name or the column title or classification if editorially derived or determined.

SAMPLE ENTRIES

The following are some sample entries taken from each of the four sections included under the subject index:

EXPLANATION OF ENTRIES

Each entry in the subject index contains the following basic in-
formation where pertinent: (1) subject material, (2) volume and issue
number, (3) date, (4) pages, (5) author, (6) column identification,
(7) column subheads (if recurrent), (8) special classification, such as
Year-End Summary, Semiannual Review, Boxed Insert, etc.

Subject Material

For articles and reports, the subject entry is the title of the
article in quotes, followed by subheadings or editorial comment. For
columns and the miscellaneous entries, the subject material will be in
quotation marks if titles or subheadings are given. If no title or
subheading is available or suitable, abstracts without quotation marks

will be included. For columns, only selected portions of column material or subheadings may be abstracted or included.

Volume and Issue Numbers

Volume and issue numbers are given for each entry. Even if the volume or issue number appears incorrectly on the cover of an issue, a correction in the index reference has been made to follow chronological sequence. From 1928-1953, each new volume began with the February issue. Beginning with 1954, the first issue in the volume is January. Annual issues have generally been published in February, with semiannual issues in July or August of each year.

Date

The corresponding month and year for the volume and issue cited in an entry are included for all subject index entries.

Pages

Inclusive pages are given for all articles and reports in the subject index. For columns and miscellaneous entries, only those pages on which material has been cited or abstracted have been included.

Author, Column, Classification

For all sections of the subject index, the following information has been included in parentheses or brackets following the main entry:

1. Author's name, if signed.
2. Column, including regular subheadings, if taken from a titled column.
3. Classification, if included.

CONTENTS OF SUBJECT INDEX

Articles

Articles are featured discussions of specialized studies, with extensive research, broad coverage, and comprehensive approach, and they are usually among the longer contributions to the REVIEW. The entries in this section are usually above and beyond the type of material normally included in the month-to-month coverage of the REVIEW, and as such they warrant the informal classification of "special articles." These may include extensive geographic studies, industry studies, etc. The types of articles have varied considerably over the period of the REVIEW's publication, but all entries which could be classed as articles have been included in the subject index.

Reports

Reports are also featured discussions, but they cover only one aspect or phase of a specific topic, or else they provide a more generalized coverage of a broader subject. Entries frequently are featured material from columns and are often an outgrowth of regularly reported data. All contributions to the REVIEW which could be classed as reports have been included in the subject index.

Columns

Columns are comprised of contributions occurring frequently (often monthly) under the same title or heading and featuring analysis and interpretation of regularly collected data for a segment of the Texas business activity. In general, the column material in the index has been grouped insofar as possible under those headings or divisions currently or recently found in the REVIEW, e.g., Agriculture, The Business Situation in Texas, Construction, Finance, Retail Trade, etc. Where a column has appeared under variant titles, these will appear below the section title in parentheses following the word Also.

While all contributions classed as articles or reports have been included in the subject index, not all column entries have been cited. However, since much of the column material is of considerable interest from a research standpoint, it was found useful to provide titling or abstracting for this information. These abstracts are not intended to take the place of reading the entry but merely to suggest trends and types of information offered.

Some of the characteristics of the information abstracted from the columns include: (1) part of any long-range trend (local, state, or national), such as the depression, recovery, war, reconversion, industrial expansion, and so on; (2) illustration of a basic economic, financial, or industrial principle; (3) discussion of state or national administration policies, political attitudes, legislative programs, financial policies, or overall industry policies.

Miscellaneous

The section for miscellaneous entries includes divers and sundry information, either in untitled column form or as boxed inserts or announcements, which are to be found throughout the REVIEW. All items of interest not already classified under the other three sections have been listed chronologically under this section, with each entry including a descriptive classification.

AUTHOR INDEX

The author index includes all signed contributions appearing in the REVIEW, regardless of whether or not they have been entered in the subject index. The authors' names are arranged alphabetically, with each entry containing essentially the following:

AUTHOR'S NAME. Types of contribution (miscellaneous, columns, reports, articles).

OCCURRENCE: A complete list of months and years in which an author has made signed contributions to the *Review*.

REPORTS: An itemization by title and date of all of the above contributions classed as reports.

ARTICLES: An itemization by title and date of all of the contributions classed as articles.

Where there is multiple authorship to an article or report, the entry will be indexed under each author, and the other authors will be listed. Coauthored entries appear at the end of an author's individual contributions.
