

LEGEND

The texture given in the descriptive heading refers to the texture of the surface layer of the major soils

NEARLY LEVEL TO GENTLY SLOPING CLAYEY AND LOAMY SOILS ON UPLANDS

1 Lake Charles-Dacosta: Somewhat poorly drained, very slowly permeable clayey and loamy soils

NEARLY LEVEL TO GENTLY SLOPING LOAMY SOILS ON UPLANDS

2 Nada-Telferner: Poorly drained and somewhat poorly drained, very slowly permeable loamy soils

3 Telferner-Edna: Somewhat poorly drained and poorly drained, very slowly permeable loamy soils

4 Inez: Somewhat poorly drained, very slowly permeable loamy soils

5 Faddin-Edna: Somewhat poorly drained and poorly drained, very slowly permeable loamy soils

NEARLY LEVEL TO GENTLY SLOPING SANDY, GRAVELLY, AND LOAMY SOILS ON UPLANDS

6 Straber: Moderately well drained, slowly permeable sandy soils

7 Weesatche-Papalote: Well drained and moderately well drained, moderately permeable and slowly permeable loamy soils

8 Garcitas: Somewhat poorly drained, very slowly permeable gravelly soils

9 Fordtran: Somewhat poorly drained, very slowly permeable sandy soils

NEARLY LEVEL CLAYEY SOILS ON FLOOD PLAINS

10 Meguin-Trinity: Well drained and somewhat poorly drained, moderately permeable and very slowly permeable clayey soils

11 Rydolph-Trinity: Somewhat poorly drained, slowly permeable and very slowly permeable clayey soils

12 Aransas-Austwell: Poorly drained, saline, very slowly permeable clayey soils

Compiled 1981

Each area outlined on this map consists of more than one kind of soil. The map is thus meant for general planning rather than a basis for decisions on the use of specific tracts.
