This report contains information for the year 1991 as well as some historical information. It is published as a two volume set.

Information on availability of this publication and other publications may be obtained from the Railroad Commission of Texas, Publication Sales, P.O. Box 12967, Austin, Texas 78711-2967 (telephone 512-463-7255).

Please note the following explanations of terms and abbreviations used in this report.

All gas volumes reported in thousand cubic feet (MCF) at a standard base pressure of 14.65 pounds per square inch absolute and a standard base temperature of 60 degrees fahrenheit.

All liquid volumes reported in barrels of 42 U.S. gallons.

GAS WELL GAS PRODUCTION is **WET GAS**, which includes **LEASE CONDENSATE (BBL)** converted to gas equivalent (MCF).

Production and well count data for 1990 has been revised to include additional data received by mid-February, 1992.

Production and well count data for 1991 includes all reports received by mid-February, 1992.

Data for producing oil wells prior to 1990 is based on preliminary production reports filed for the month of December for each year; beginning in 1990, producing oil well counts are based on producing status in December, as described below under **PROD WELLS EOY**.

PROD WELLS EOY - Producing oil wells at end of year; consists of oil wells classed as producing (prorated, marginal, exempt, and new pool exempt) in December of production year. Oil production is reported by lease, not by individual well.

TOTAL WELLS EOY - Total oil wells at end of year; consists of all wells, except plugged wells, on record at the end of production year (includes producing, shut-in, injection, service, etc.)

PROD WELLS 1991 - Producing gas wells for production year; consists of all gas wells having production during 1991.

TOTAL WELLS 1991 - Total gas wells at end of year; consists of all wells on record at the end of 1991 (includes wells plugged during that year, as well as producing, shut-in, injection, service, etc.)

A - Associated 49(b) Field.

C - Gas cycling reservoir gross production reported.

F - One or more wells from this reservoir are producing "full well stream" to plant; hydrocarbon liquid totals may be partial.

M - Multiple county field - county listed is discovery well county.

N - Gas production data prior to 1970 is not included in cumulative totals.

N/A - Not available

The Honorable Ann Richards
Governor of Texas
Austin, Texas

Dear Governor Richards:

In compliance with provisions of the Revised Civil Statutes of the State of Texas, we respectfully submit the annual report of the Railroad Commission of Texas showing the activities of its Oil and Gas Division for the year 1991.

Respectfully,

Lena Guerrero, Chairman

James E. (Jim) Nugent, Commissioner

Bob Krueger, Commissioner

OIL AND GAS DIVISION ACTIVITIES DURING THE YEAR 1991

AUTOMATED MAPPING SYSTEM

The conversion of manual well location maps to a statewide automated map continued during 1991, with 102 counties basemapped and 92 counties plus the offshore state tracts converted at the end of the year. The converted counties contained a total of 502,136 wells.

The main priority of the automated mapping system continues to be the conversion of all 254 Texas counties as quickly as possible. The Map Department will then be able to provide more accurate and timely well location information to the Commission and the public. In addition, land network information will be available to meet the needs of all State agencies.

REGULATORY ENFORCEMENT ACTIVITY

Regulatory Enforcement (Field Operations) conducted 112,353 inspections relating to oil and gas operations during 1991. A total of 2,313 complaints were also investigated by district personnel. Some areas of operations such as drilling and well completions increased slightly, and overall field activities remained high.

STATE-FUNDED WELL PLUGGING

A fee of \$100 for each drilling permit application, authorized by the 68th session of the Texas Legislature, has been in effect since September 1, 1983. The proceeds of this fund are to be used to plug improperly abandoned wells as well as to enforce the laws, rules, and regulations relating to the abatement of pollution. Penalties and interest collected from plugging violations are also deposited into the well plugging fund. Certain personnel in each district office, as well as the Austin headquarters office, have been assigned to the well plugging activity and work exclusively with well plugging due to the increase in plugging activity brought about by this legislation.

PIPE LINES

The Act "Regulating Pipe Lines" was approved pursuant to the provisions and requirements of Chapter 30 of the Acts of the Regular Session of the Thirty-fifth Legislature of Texas on February 20, 1917.

Pipeline permits originated as Form P-13, November 26, 1919 (Statewide Rule 36) as stated in the Oil and Gas Conservation law, Circular #15. Form P-13 was changed to Form T-4 November 11, 1971 (Doc. 20-6143). Amendments to Form T-4 were made December 1, 1977. This was primarily done to include the statement as mentioned on Form T-4 (Cox Act, Art. 6050. R.C.S.)

Currently the regulation of pipelines is pursuant to the Texas Natural Resources Code, Chapter 111 along with Railroad Commission of Texas Statewide Rules 1, 20, 70, 71, 72 and 73.

There are at present approximately 27,816 miles of crude oil trunk lines, 27,289 miles of gathering lines, excluding lease flow lines, and 31,460 miles of product lines in operation. Because pipeline miles are reported separately for these categories, some duplicate reporting of pipeline miles may occur when pipelines are used to transport more than one material.

There are now in operation 197 common carrier pipeline permits in Texas. Most of these carriers perform both gathering and trunk transmission service. Some carriers install facilities for loading and unloading tankers, cars, and barges. The rate for gathering oil ranges from one cent per barrel to more than one dollar per barrel, depending upon the section of Texas from which the oil is gathered.

West Central Texas	7B, 7C	12.90¢ - 95.00¢
West Texas	8, 8A	6.00¢ - 108.00¢

TECHNICAL HEARINGS ACTIVITY

During 1991 the Technical Hearings Activity reviewed 3,776 applications which required compliance or exception to Statewide Rules; 1,153 of these involved exceptions to Rule 37. There were 793 hearings held, which consisted of 65 Rule 37 hearings, 594 technical hearings and 134 enforcement hearings. Out of this total of hearings, 26 of the Rule 37 hearings were protested, and 52 of the technical hearings were protested.

The Technical Hearings Section was actively involved with the Enhanced Oil Recovery Tax Incentive Program. Statutory authority was given to include expansions of existing EOR projects. The incremental increase in production is eligible for the tax incentive for these projects. A total of 106 applications for area designation were processed during 1991; 38 projects received approval for the tax incentive.

The engineers and geologists in the section continued to give technical support to other activities within the Oil and Gas Division.

NATURAL GAS POLICY ACT (NGPA) OF 1978

The Natural Gas Policy Act of 1978 (NGPA) was enacted and signed into law on November 9, 1978, to be effective December 1, 1978. The Act was proposed to deal with the price disparity between gas sold in the interstate (among states) markets and gas sold in the intrastate (within a state) market. The NGPA was intended also to provide incentives to spur exploration, development, and production of the natural gas supply. The Act was meant to establish a mechanism to allow higher prices to be paid for gas and to increase the price of natural gas at a consistent rate while aiming toward deregulation of natural gas in the future. Significant changes were brought forward by the NGPA. Federal price regulation was extended to intrastate natural gas. Additionally, prices now are set by statute rather than established by regulatory agencies on a cost basis.

Title I of the NGPA contains the wellhead pricing provisions that set ceiling prices for gas sold at the wellhead. The NGPA establishes certain statutory maximum price levels applicable to all first sales of domestically produced gas. The Railroad Commission of Texas has jurisdiction over four categories under Title I. These are:

- Section 102 - new natural gas
- Section 103 - new, onshore production well gas
- Section 107 - high-cost natural gas
- Section 108 - stripper well natural gas

Beginning September 1, 1989, the NGPA Section became responsible for certifying eligible high-cost gas wells for state severance tax exemption. In 1991, 1,218 tax exemption certification requests were received; 700 were administratively approved. Also in 1991, 39 requests for tight sands area designation were received and 26 were approved.

The following statistics show the number of applications received by category and how they have been processed.

UNDERGROUND INJECTION CONTROL (UIC)

The Railroad Commission has sole responsibility for the prevention of pollution of surface and subsurface water in the state that might result from activities associated with exploration, development, and production of oil, gas, and geothermal resources. The Commission's jurisdiction and responsibilities for preventing pollution of surface and subsurface water have increased steadily through the years. Today, its broad authority over oil and gas production is derived from the Texas Natural Resources Code and from Chapters 26, 27, and 29 of the Texas Water Code. The Commission has been active in the control of underground injection activities for more than forty-five years. The first permit to inject water into a productive reservoir was issued in 1938.

On January 2, 1980, the Underground Injection Control (UIC) Section of the Oil and Gas Division was created to administer a program consistent with state and federal law, including: oversight of the injection, disposal, and hydrocarbon storage well permits already issued; issuance and oversight of new permits; and coordination with EPA and other federal and state agencies in a concerted program to protect fresh water in Texas. On April 23, 1982, the EPA approved the Commission's UIC Program.

There are currently over 54,000 permitted Class II injection/disposal wells in Texas associated with oil and gas production. These wells are tracked by the Commission on a computer system. As a result, information concerning permits, lease names or lease numbers, counties, and operators can be retrieved from the system instantaneously via system terminals.

The UIC Section currently serves as the focal point in the Oil and Gas Division for technical support and coordination on environmental protection matters. Additional responsibilities include pressure testing of disposal/injection wells, permitting and testing of Class III brine mining injection wells, and permitting of pits and discharges.

NATURAL GAS OPERATIONS

Texas natural gas production of 5,509,989,547 MCF in 1991 is a decrease of 0.4% from 1990 production. This represents nearly 24.0% of the natural gas produced in the United States for the year. (Department of Energy)

The following table shows Texas natural gas production for the past ten years. In 1973, production first dropped since records have been kept by the Railroad Commission.

Texas natural gas marketed during 1991 was 4,286 billion cubic feet. This included 1,986 billion cubic feet exported to other states and 2,300 billion cubic feet marketed in Texas.

The Commission continued to use the terms adopted in 1952 that had previously been used by the American Gas Association and the American Petroleum Gas Institute. The term "gas well gas" is used to mean gas produced from wells classified by the Commission as gas wells. The term "dry gas" had been used for this purpose prior to 1952. The term "non-associated gas" is used to mean gas that is not in contact with or dissolved in crude oil in the reservoirs. The term "casinghead gas" is used to mean gas produced from wells classified by the Commission as oil wells. The term "dissolved gas" is used to mean gas that is dissolved in crude oil at reservoir conditions.

The accompanying Chart 1, reproduced by permission from Economics of Natural Gas in Texas by Stockton, Henshaw and Graves, illustrates the classification of natural gas.

¹ Extraction Loss is shrinkage in Gas Volume due to removal of Liquefied Hydrocarbons.

² Disposition Volumes not adjusted for corrected answers.

³ Marketed Production is the total gas to Transmission Lines, Carbon Black, and Plant Fuel and Lease Use.
