NOTES

This report contains information for the year 1989 as well as some historical information. It is published as a two volume set.

Information on availability of this publication and other publications may be obtained from the Railroad Commission of Texas, Publication Sales, Capitol Station - P.O. Drawer 12967, Austin, Texas 78711-2967 (telephone 512-463-7255).

Please note the following explanations of terms and abbreviations used in this report.

All gas volumes reported in thousand cubic feet (MCF) at a standard base pressure of 14.65 pounds per square inch absolute and a standard base temperature of 60 degrees fahrenheit.

All liquid volumes reported in barrels of 42 U.S. gallons.

GAS WELL GAS PRODUCTION is **WET GAS,** which includes LEASE CONDENSATE (BBL) converted to gas equivalent (MCF).

Production data includes all reports received by mid-February, 1990.

PROD WELLS EOY - Producing oil wells at end of year; consists of oil wells classed as producing (prorated, marginal, exempt, and new pool exempt) in December of production year. Oil production is reported by lease, not by individual well.

TOTAL WELLS EOY - Total oil wells at end of year; consists of all wells, except plugged wells, on record at the end of production year (includes producing, shut-in, injection, service, etc.).

PROD WELLS 1989 - Producing gas wells for production year; consists of all gas wells having production during 1989.

TOTAL WELLS 1989 - Total gas wells at end of year; consists of all wells on record at the end of 1989 (includes wells plugged during that year, as well as producing, shut-in, injection, service, etc.).

A - Associated 49(b) Field.
C - Gas cycling reservoir gross production reported.
F - One or more wells from this reservoir are producing "full well stream" to plant; hydrocarbon liquid totals may be partial.
M - Multiple County.
N - Gas production data prior to 1970 is not included in cumulative totals.
N/A - Not available

OIL AND GAS DIVISION ACTIVITIES DURING THE YEAR 1989

AUTOMATED MAPPING SYSTEM

The conversion of manual well location maps to a statewide automated map continued during 1989, with 49 counties basemapped and 44 counties converted at the end of the year. The converted counties contained a total of 308,531 wells.

The main priority of the automated mapping system continues to be the conversion of all 254 Texas counties and offshore tracts as quickly as possible. The Map Department will then be able to provide more accurate and timely well location information to the Commission and the public. In addition, land network information will be available to meet the needs of all State agencies.

REGULATORY ENFORCEMENT ACTIVITY

Regulatory Enforcement (Field Operations) conducted 112,857 inspections relating to oil and gas operations during 1989. A total of 2,733 complaints were also investigated by district personnel. Some areas of operations decreased, such as drilling and well completions, but overall field activities remained high. A decrease in the number of field inspectors has continued due to budget restraints.

STATE-FUNDED WELL PLUGGING

A fee of $100 for each drilling permit application, authorized by the 68th session of the Texas Legislature, has been in effect since September 1, 1983. The proceeds of this fund are to be used to plug improperly abandoned wells as well as to enforce the laws, rules, and regulations relating to the abatement of pollution. Penalties and interest collected from plugging violations are also deposited into the well plugging fund. Certain personnel in each district office, as well as the Austin headquarters office, have been assigned to the well plugging activity and work exclusively with well plugging due to the increase in plugging activity brought about by this legislation.

1989 Statistics

Number of Wells Approved for Plugging	816
Number of Wells Plugged	640
Number of Pollution Abatements Approved	91
Number of Pollution Abatements Completed	79
Cost of Well Pluggings	$2,007,098.27
Cost of Pollution Abatements	25,484.70

PIPE LINES

The Act "Regulating Pipe Lines" was approved pursuant to the provisions and requirements of Chapter 30 of the Acts of the Regular Session of the Thirty-fifth Legislature of Texas on February 20, 1917.

Pipeline permits originated as Form P-13, November 26, 1919 (Statewide Rule 36) as stated in the Oil and Gas Conservation law, Circular #15. Form P-13 was changed to Form T-4 November 11, 1971 (Doc. 20-6143). Amendments to Form T-4 were made December 1, 1977. This was primarily done to include the statement as mentioned on Form T-4 (Cox Act, Art. 6050. R.C.S.)

Currently the regulation of pipelines is pursuant to the Texas Natural Resources Code, Chapter 111 along with Railroad Commission of Texas Statewide Rules 1, 20, 70, 71, 72 and 73.

There are at present approximately 28,898 miles of crude oil trunk lines, 23,541 miles of gathering lines, excluding lease flow lines, and 31,506 miles of product lines in operation. Because pipeline miles are reported separately for these categories, some duplicate reporting of pipeline miles may occur when pipelines are used to transport more than one material.

There are now in operation 141 common carrier pipeline permits in Texas. Most of these carriers perform both gathering and trunk transmission service. Some carriers install facilities for loading and unloading tankers, cars, and barges. The rate for gathering oil ranges from less than two cents per barrel to more than one dollar per barrel, depending upon the section of Texas from which the oil is gathered.

AREA	RRC DISTRICT	RATE PER BBL.
East Texas Central	5	11.10¢ - 100.00¢
East Texas	6, 6E	22.60¢ - 110.00¢
Panhandle	9, 10	10.50¢ - 100.00¢
Southwest Texas	1, 2, 4	1.63¢ - 111.75¢
Texas Gulf Coast	3	1.50¢ - 150.00¢
West Central Texas	7B, 7C	8.00¢ - 94.00¢
West Texas	8, 8A	5.00¢ - 108.00¢

TECHNICAL HEARINGS ACTIVITY

During 1989 the Technical Hearings Activity reviewed 2,985 applications which required compliance or exception to Statewide Rules; 1,415 of these involved exceptions to Rule 37. There were 1,184 hearings held, which consisted of 143 Rule 37 hearings, 686 technical hearings and 355 enforcement hearings. Out of this total of hearings, 57 of the Rule 37 hearings were protested, and 150 of the technical hearings were protested.

The Technical Hearings Section played a major role in formulating Rule 50 (EOR Tax Incentive) and changes in Rule 38 which provide for processing without hearing. This section also played a major roll in drafting the proposed new Rule 86 which will provide for horizontal drainhole drilling regulation. In addition, Technical Examiners presided at two hearings to consider Commission adoption of special field rules for the Pearsall (Austin Chalk) and Flying W (Wolfcamp) Fields which provide for horizontal drainhole drilling and production.

New procedures were developed and implemented to review and process Rule 50 and Rule 38 applications

NATURAL GAS POLICY ACT (NGPA) OF 1978

The Natural Gas Policy Act of 1978 (NGPA) was enacted and signed into law on November 9, 1978, to be effective December 1, 1978. The Act was proposed to deal with the price disparity between gas sold in the interstate (among states) markets and gas sold in the intrastate (within a state) market. The NGPA was intended also to provide incentives to spur exploration, development, and production of the natural gas supply. The Act was meant to establish a mechanism to allow higher prices to be paid for gas and to increase the price of natural gas at a consistant rate while aiming toward deregulation of natural gas in the future. Significant changes were brought forward by the NGPA. Federal price regulation was extended to intrastate natural gas. Additionally, prices now are set by statute rather than established by regulatory agencies on a cost basis.

Title I of the NGPA contains the wellhead pricing provisions that set ceiling prices for gas sold at the wellhead. The NGPA establishes certain statutory maximum price levels applicable to all first sales of domestically produced gas. The Railroad Commission of Texas has jurisdiction over four categories under Title I. These are:

Section 102 - new natural gas
Section 103 - new, onshore production well gas
Section 107 - high-cost natural gas
Section 108 - stripper well natural gas

Beginning September 1, 1989, the NGPA Section became responsible for certifying eligible high-cost gas wells for state severance tax exemption. In 1989, 150 tax exemption certification requests were received; 57 were administratively approved.

The following statistics show the number of applications received by category and how they have been processed.

UNDERGROUND INJECTION CONTROL (UIC)

The Railroad Commission has sole responsibility for the prevention of pollution of surface and subsurface water in the state that might result from activities associated with exploration, development, and production of oil, gas, and geothermal resources. The Commission's jurisdiction and responsibilities for preventing pollution of surface and subsurface water have increased steadily through the years. Today, its broad authority over oil and gas production is derived from the Texas Natural Resources Code and from Chapters 26, 27, and 29 of the Texas Water Code. The Commission has been active in the control of underground injection activities for more than forty-five years. The first permit to inject water into a productive reservoir was issued in 1938.

On January 2, 1980, the Underground Injection Control (UIC) Section of the Oil and Gas Division was created to administer a program consistent with state and federal law, including: oversight of the injection, disposal, and hydrocarbon storage well permits already issued; issuance and oversight of new permits; and coordination with EPA and other federal and state agencies in a concerted program to protect fresh water in Texas. On April 23, 1982, the EPA approved the Commission's UIC Program.

There are currently over 55,000 permitted Class II injection/disposal wells in Texas associated with oil and gas production. These wells are tracked by the Commission on a computer system. As a result, information concerning permits, lease names or lease numbers, counties, and operators can be retrieved from the system instantaneously via system terminals.

The UIC Section currently serves as the focal point in the Oil and Gas Division for technical support and coordination on environmental protection matters. Additional responsibilities include pressure testing of disposal/injection wells, permitting and testing of Class III brine mining injection wells, and permitting of pits and discharges.

PRODUCING DAYS AND MARKET DEMAND FACTORS FOR CRUDE OIL

The following outline shows the number of producing days as reflected by monthly Statewide General Shutdown Orders of all oil wells in the various districts and fields of Texas by the Railroad Commission to January 1, 1963; and the Market Demand Factors applicable to proratable wells beginning with January 1, 1963, as reflected by Monthly Market Demand Orders. Neither the shutdown days nor the Market Demand Factor apply (1) to bona fide marginal wells, (2) to certain exempt fields, (3) to certain designated fields which have different producing days or a different Market Demand Factor from those indicated below, and (4) to new fields operating under discovery allowables.

DEVELOPMENTS IN THE OIL AND GAS INDUSTRY IN TEXAS DURING THE YEAR 1989

OIL PRODUCTION AND DEVELOPMENT

Crude oil production in the state during 1989 totaled 650,513,557 barrels and averaged 1,782,229 barrels daily. Production decreased 6.83% when compared to the 698,224,360 barrels and daily average of 1,907,717 barrels produced during 1988.

There were 10,054 completions made in Texas in 1989, including 4,914 oil, 2,760 gas, and 2,380 dry holes. This was a decrease of 2,207 from the 12,261 registered in 1988. These 10,054 completions included 2,541 wildcats, of which 399 were oil, 504 were gas, and 1,638 were dry. The 8,133 development completions consisted of 4,515 oil, 2,256 gas, 742 dry, and 620 service completions.

The number of wells plugged that were previously producing was 7,059 in 1989, a decrease of 809 from the previous year.

NATURAL GAS OPERATIONS

Texas natural gas production of 5,595,189,980 MCF in 1989 is a decrease of 1.9% from 1988 production. This represents nearly 26.9% of the natural gas produced in the United States for the year. (Department of Energy)

The following table shows Texas natural gas production for the past ten years. In 1973, production first dropped since records have been kept by the Railroad Commission.

The Commission continued to use the terms adopted in 1952 that had previously been used by the American Gas Association and the American Petroleum Gas Institute. The term "gas well gas" is used to mean gas produced from wells classified by the Commission as gas wells. The term "dry gas" had been used for this purpose prior to 1952. The term "non-associated gas" is used to mean gas that is not in contact with or dissolved in crude oil in the reservoirs. The term "casinghead gas" is used to mean gas produced from wells classified by the Commission as oil wells. The term "dissolved gas" is used to mean gas that is dissolved in crude oil at reservoir conditions.

The accompanying Chart 1, reproduced by permission from Economics of Natural Gas in Texas by Stockton, Henshaw and Graves, illustrates the classification of natural gas.

* Includes 0.86% reduction due to discontinued reporting of federal offshore production.

[1]Totals may not equal sum of components due to independent rounding.

[2]The term "Liquid Hydrocarbon" as used herein, covers all liquefieble hydrocarbons recovered from gas wells and casinghead wells by natural gasoline plants, cycling plants and separators, includes condensate, natural gasoline, butane–propane, ethane, and other products.

[3]Comparisons in this table do not include "Liquid Hydrocarbons".

[1] Extraction Loss is shrinkage in Gas Volume due to removal of Liquefied Hydrocarbons.

[2] Disposition Volumes not adjusted for corrected answers.

[3] Marketed Production is the total gas to Transmission Lines, Carbon Black, and Plant Fuel and Lease Use.

NOTE: This table does not contain all information from updated reports that is reflected in field production data in this report.

Re-completions includes deepen or plug back to new zone; re-entry of plugged & abandoned well counted as new hole.

Total completions in new holes plus total dry holes drilled may be greater than total new holes drilled due to multiple completions.

Data compiled prior to January 1, 1988 may not be comparable due to changes in compilation methods.
