Commissioner of Health

CHEMICAL QUALITY OF WATER SUPPLIED  
BY  
PUBLIC DRINKING WATER SYSTEMS  
IN  
TEXAS

Public health officials charged with the responsibility of safeguarding the health of the people they serve must be aware of the chemical and bacteriological quality of the water being supplied for domestic uses. During the past thirty years, the public health significance of the presence of fluorides, nitrates, and sodium has been emphasized. Public interest in pollution and water supply development has intensified, and all agencies dealing with our State's water supplies should make available data which may be useful in appraising our water problems. In formulating a State Water Policy and Statewide water supply development program, water quality must be considered when seeking possible solutions to water and water shortage problems.

The Civil Statutes of Texas prescribe the duties of the Texas Department of Health relating to the regulation and control of public drinking water systems in the State. Further, the Department is the primary enforcement agency in the State for the "Safe Drinking Water Act", Public Law 93-523, and the "Interim Primary Drinking Water Regulations", which have been promulgated by the Environmental Protection Agency. Under the authority of the Federal and State laws, the Texas Board of Health has adopted "Drinking Water Standards Governing Drinking Water Quality and Reporting Requirements for Public Water Supply Systems". The standards prescribe the required bacteriological, chemical, and radiological analyses that are to be performed on public drinking water supplies and the frequency at which these analyses are to be conducted. Samples for chemical analyses are collected by representatives of this Department at the time of the sanitary survey of each system and submitted to the Bureau of Laboratories, Texas Department of Health, in Austin for analysis.

The Division of Water Hygiene, Texas Department of Health, has on file, copies of the individual analysis reports, and these may be reviewed by interested individuals. In view of the interest of members of the medical profession, dentists, city and county officials, industrialists, consulting engineers and hydrologists, well contractors, suppliers of water treatment equipment, and others, this publication has been prepared listing the most recent analysis of a single representative sample from the respective system.

The following test results are reported in this publication in milligrams per liter (mg/l) with the exception of pH:

Calcium (Ca)	Manganese (Mn)	Nitrate as Nitrogen (NO <sub>3</sub> as N)
Magnesium (Mg)	Iron (Fe)	Total Dissolved Solids (TDS)
Sodium (Na)	Sulphate (SO <sub>4</sub> )	Phenolphthalein Alkalinity as CaCO <sub>3</sub> (P. Alk.)
Carbonate (CO <sub>3</sub> )	Chloride (Cl)	Total Alkalinity as CaCO <sub>3</sub> (Tot. Alk.)
Bicarbonate (HCO <sub>3</sub> )	Fluoride (F)	Total Hardness as CaCO <sub>3</sub> (T.H.)
		pH

In addition to the constituents listed in this publication, analysis results are available for other laboratory analyses specified in the Drinking Water Standards. Such analyses include heavy metals, organics, and radiological parameters. The limits for these primary standards can be found in Appendix A. Those public water systems which exceed the standards for these parameters are listed below. All other public water systems are within the standards for heavy metals, organics, and radiological parameters.

<u>County</u>	<u>System</u>	<u>Constituent</u>	<u>Level</u>
Austin	Bellville, City of	Gross Alpha	17.2 pCi/l

Webb	Bruni Water Works	Arsenic	0.10 mg/l
Wise	Chico, City of	Selenium	0.020 mg/l
Yoakum	EPNG-Plains Plant	Selenium	0.016 mg/l

Many of our municipalities also have provided laboratory facilities at their plants for proper control, and useful data, not otherwise available, can be obtained by contacting local officials. Also, surface water and groundwater data are collected and compiled by the Texas Department of Water Resources in cooperation with the U.S. Geological Survey, and reports on a rather large number of counties have been prepared.

In conclusion, we might emphasize that due to our limited laboratory facilities and personnel, we are not in a position to perform chemical analyses on water from private supplies unless a public health problem is involved and the sample is submitted by a local health officer. Our laboratory will perform chemical analyses on public water supplies provided the sample is submitted by an authorized public official. Our laboratories make specific determinations to appraise the quality of water for human consumption, for domestic purposes and for compliance

with our standards. Tests required to judge the suitability of water for irrigation, livestock, poultry, etc., are not performed by our laboratory personnel. It is necessary that such analyses be made by commercial laboratories or other governmental agencies engaged in such analytical work. Also, in those instances where a criminal act is involved, water analyses for detection of toxic materials should be referred through a peace officer, to the Department of Public Safety.

In addition to the chemical analyses performed by our laboratories, bacteriological tests are made on samples secured from both public and privately owned water systems, provided they are submitted in sterile containers which are furnished on request, and the sample is identified properly.

We are pleased to make these data available for distribution to interested individuals, and it is hoped that revised data can be made available at frequent intervals.

## Appenedix A

The following is quoted from this Department's "Drinking Water Standards," adopted by the Texas Board of Health on July 1, 1977:

III. Standards of Chemical and Radiological Quality. All analyses to determine compliance shall be performed by laboratories approved by the Department. Analyses shall be performed on treated water as furnished to the customer.

III.A. Maximum Constituent levels for nitrate are applicable to both the community and non-community water systems. The other constituent limits in the following table are applicable only to community type systems.

<u>Constituent</u>	<u>Level,</u> <u>Milligrams</u> <u>Per Liter</u>
Arsenic	0.05
Barium	1.0
Cadmium	0.010
Chromium	0.05
Lead	0.05
Mercury	0.002
Nitrate (as N)	10.0
Selenium	0.01
Silver	0.05

III.B. When the annual average of the maximum daily air temperatures for the location in which the community water system is situated is the following, the maximum allowable levels for fluoride are:

<u>Temperature</u> <u>Degrees Fahrenheit</u>	<u>Temperature</u> <u>Degrees Celsius</u>	<u>Level, Milligrams</u> <u>Per Liter</u>
63.9 to 70.6	17.7 to 21.4	1.8
70.7 to 79.2	21.5 to 26.2	1.6
79.3 to 90.5	26.3 to 32.5	1.4

III.C. Maximum constituent levels for organic chemicals for community systems.

<u>Constituent</u>	<u>Level</u>		<u>Level</u>	
	<u>Milligrams</u>	<u>Per Liter</u>	<u>Micrograms</u>	<u>Per Liter</u>
(1) <u>Chlorinated Hydrocarbons:</u>				
Endrin (1,2,3,4,10, 10-hexachloro-6,7-exoxy-1,4,4a,5,6,7,8,8a-octahydro-1,4-endo, endo-5, 8-dimethano naphthalene).	0.0002		.2	
Lindane (1,2,3,4,5,6-hexachlorocyclohexane, gamma isomer).	0.004		4.0	
Methoxychlor (1,1,1-Trichloro-2,2-bis (p-methoxyphenyl) ethane).	0.1		100.0	
Toxaphene (C <sub>10</sub> H <sub>10</sub> Cl <sub>8</sub> -Techinal chlorinated camphene, 67-69 percent chlorine).	0.005		5.0	
(2) <u>Chlorophenoxys:</u>				
2,4-D (2,4-Dichlorophenoxyacetic acid).	0.1		100.0	
2,4,5-TP Silvex (2,4,5-Trichlorophenoxypropionic acid).	0.01		10.0	

III.D. Maximum allowable levels for turbidity. This standard shall apply only to systems which treat surface water. The maximum allowable levels for turbidity in drinking water measured at a representative entry point (s) to the distribution systems are:

- (1) One turbidity unit (TU), as determined by a monthly average, except that five or fewer turbidity units may be allowed if the supplier of water can demonstrate to the Department that the higher turbidity does not do any of the following: (1) Interfere with disinfection; (2) Prevent maintenance of an effective disinfectant agent throughout the distribution system; or (3) Interfere with microbiological determinations.
- (2) Five turbidity units based on an average for two consecutive days.

X.A. Maximum contaminant levels for radium-226, radium-228, and gross alpha particle radioactivity for community systems:

<u>Constituent</u>	<u>Level p Ci Per Liter</u>
(1) Combined radium-226 and radium-228	5
Gross alpha particle activity (including radium-226 but excluding radon and uranium)	15
