Statewide Unemployment Rate Remains Below 4.0 Percent For Third Consecutive Month (Seasonally Adjusted)

The Texas seasonally adjusted unemployment rate eased downward over the month, from 3.8 percent in January to 3.7 percent in February. This marks the fifth consecutive month that the unemployment rate was at or below 4.0 percent. The number of employed Texans increased by 10,500 in February to 10,105,100, which is up 312,800 (or 3.2 percent) from last year's employment level. The number of unemployed Texans fell by 11,400 over the month to 392,100 for a 15 percent drop from last February's level of 461,400.

February Sees Continued Statewide Nonagricultural Job Growth (Seasonally Adjusted)

Total Nonagricultural Wage and Salary employment grew by 33,200 jobs in February, the largest monthly gain in six months. All major industries enjoyed over-the-month growth, with Trade and Services accounting for a little over half of the monthly increase. Annual growth inched upward from 2.9 percent in January to 3.0 percent in February.

Construction rebounded from January losses with the addition of 5,200 jobs in February, the largest February increase since 1997. Gains in *Heavy Construction* and *Special Trade Contractors* made up over 90 percent of the increase. February's strong showing brought over-the-year growth up to 4.3 percent with 23,600 jobs added.

000,01

8 000

7.000

6.000

5.000

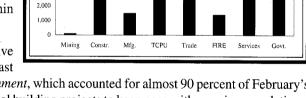

4,000

3.000

Durable Goods Manufacturing bounced back from losses in January with the addition of 1,300 jobs in February. At 1.3 percent, annual job growth remained positive for the eleventh straight month.

Although Services added 8,600 jobs in February, *Business Services* experienced a decrease of 2,200 jobs for the month - the first over-the-month job loss for this industry since April 1999. Some of the decline in *Business Services* may be attributable to cost-cutting measures being taken by businesses in anticipation of slowing economic growth. However, the annual growth rate for *Business Services* remained the highest of any industry within Services at 7.9 percent.

February Statewide Nonag. Employment Change by Major Industry (Seasonally Adjusted)

February's gain of 2,500. Growth was centered in *Local Government*, which accounted for almost 90 percent of February's increase. Many areas around the state continue to complete school building projects to keep pace with growing populations.

Metropolitan Statistical Area (MSA) Employment (Non-Seasonally Adjusted)

Total Nonagricultural Wage and Salary employment within the MSAs grew by 57,000 jobs in February. All MSAs experienced over-the-month growth with the exception of Sherman-Denison and Wichita Falls, where employment levels remained unchanged. The main source of this growth was Services, which added 20,600 jobs over the month. *Local Government* was also a contributor to February's change with a gain of 13,900 jobs.

State Government employment grew by 8,400 jobs within the MSAs in February. The Bryan-College Station MSA experienced an increase of 3,600 jobs, while Austin-San Marcos gained 1,600 as university and college employees returned to work for the spring semester.

Transportation, Communications, and Public Utilities (TCPU) employment in the Houston MSA experienced a seasonal gain of 900 jobs in February, primarily due to additions in *Transportation*. Over the year, TCPU employment increased by 6,800 jobs in this MSA for an annual growth rate of 4.6 percent. February marked the seventh consecutive month with an annual growth rate above four percent in Houston.

2000 Occupational Wages in Texas

by Larbi Hanni and Mark Dermit

Have you needed to know how much an Electrician earns in Beaumont or a Desktop Publisher makes in Dallas? Or how many Carpenters are employed in Waco? Through the Occupation Employment Survey, the Labor Market Information Department of the Texas Workforce Commission hopes to answer these questions and many more about occupational data with the release of its 2000 Occupational Wage and Employment data for the State and for all 27 metropolitan statistical areas (MSAs). This survey of more than 820 occupations was conducted from October 1999 through August 2000. A comprehensive survey of this type would not have been possible if it weren't for the cooperation of the more than 25,000 Texas employers who were surveyed. Their valued participation gives us the certainty that the data presented here and in our publication, 2000 State and MSA Occupational Wages and Employment, are the most reliable and comprehensive found anywhere. Note: data for each of the workforce development board areas (WDBAs) will be available soon.

Texas versus National Wages

The first question that occurred to us when we examined the data was how did the wages in Texas compare to the national data. The first thing we did was to locate all of the occupations where there was comparative data. Out of the 617 occupations for which there was a direct comparison, we found that Texas had higher wages in 140 of them, the same wage in one occupation, and lower wages in 476 occupations. Of even more interest, we found that 88 of these 140 occupations were in the upper end of the wage spectrum defined by wages that are greater than \$16.75. Is this significant? On the surface, what begins to emerge is that the highest paying occupations in Texas have wages that exceed the national data. So we looked at the top twenty highest paying occupations and compared those to their national counterparts. We found that ten of the top twenty occupations had wages that were lower than the wages for the same occupations at the national level. The other ten had higher wages.

| Top 20 Highest P | | | |
|---|----------------------------|----------------------------|-----------|
| Occupation | National Mean Wage/hr (\$) | Texas Mean Wage/hr (\$) | Differenc |
| Surgeons | \$65.22 | \$68.63 | \$3.41 |
| Internists, general | \$59.27 | \$65.54 | \$6.27 |
| Podiatrists | \$48.12 | \$61.25 | \$13.13 |
| Pediatricians, general | \$54.21 | \$60.56 | \$6.35 |
| Obstetricians and gynecologists | \$65.11 | \$57.86 | -\$7.25 |
| Family and general practitioners | \$50.04 | \$49.53 | -\$0.51 |
| Psychiatrists | \$49.84 | \$47.46 | -\$2.38 |
| Chief executives | \$48.67 | \$44.75 | -\$3.92 |
| Optometrists (*) | \$37.38 | \$42.12 | \$4.74 |
| Dentists (*) | \$51.03 | \$41.70 | -\$9.33 |
| Engineering managers | \$39.21 | \$40.23 | \$1.02 |
| Lawyers (*) | \$43.44 | \$37.73 | -\$5.71 |
| Petroleum engineers (*) | \$34.99 | \$37.19 | \$2.20 |
| Physicists | \$36.61 | \$36.39 | -\$0.22 |
| Computer and information systems managers | \$35.79 | \$35.12 | -\$0.67 |
| Mathematicians | \$32.68 | \$34.82 | \$2.14 |
| Actuaries (*) | \$34.56 | \$34.77 | \$0.21 |
| Natural sciences managers | \$34.84 | \$34.20 | -\$0.64 |
| Air traffic controllers (*) | \$35.19 | \$33.41 | -\$1.78 |
| Economists · | \$29.59 | \$33.21 | \$3.62 |

(*) = Made the top 20 highest paying occupations in 1999.

What about the occupations that employ the most Texans? Have these jobs had a similar experience as those that pay the most? First of all, what types of jobs are these? These occupations consist of Retail Salespersons, General Office Clerks, Cashiers, General and Operations Managers, Waiters and Waitresses, Customer Service Representatives, Janitors and Cleaners, Freight Laborers, Registered Nurses, and Truck Drivers. Except for General Mangers and Registered Nurses, all of these jobs require only minimal education and training. What we found when we compared wages in these occupations to national figures was that Texas wages lagged behind the nation in all occupations except one: Retail Salespersons, and that difference was only 2 cents.

MSA Comparisons

Another part of the analysis involved comparing Texas' highest paying occupations (statewide) against the highest paying occupations in each of its 27 MSAs. Looking at this, we found that four occupations (Chief Executives, Engineering Managers, Computer and Information Systems Managers, and Lawyers) from the statewide list were found in 20 or more of the MSAs and one, Chief Executives, was found in 25 of the 27 MSAs. Of even more interest was the fact that nine of the top paying occupations were found in the Health Services sector. In contrast, Surgeons, General Internists, appeared in only one MSA with Podiatrists, Physicists, Mathematicians, and Air Traffic Controllers showing in none, making only the statewide list.

For those occupations that employed the most people, Dallas is still the place to be. Five of those occupations (Retail Salespersons, General Office Clerks, General and Operations Managers, Customer Service Representatives, and Truck Drivers) paid the highest wages of any MSA in the state. Austin-San Marcos MSA offers the highest wage for Cashiers. Amarillo MSA has the highest wage for Waiters and Waitresses. For Registered Nurses, the El Paso MSA seems to be the ideal place. Janitors and Cleaners are paid the most in the Fort Worth-Arlington MSA, and Galveston-Texas City MSA paid the highest wages for Freight Laborers.

The SOC...

One of the major changes between the 2000 survey and the previous survey is the way that occupations are classified. During previous survey years, a program-specific coding structure was used to classify occupations in the OES survey. Today, a new coding structure, called the Standard Occupational Classification or SOC, is used to classify all occupations found in the 2000 survey.

Why is this important? Because now, not only will OES use this coding structure, but all federal programs will use it as well. So if you would like to compare data on Respiratory Therapists in the OES program to demographic occupational data provided by the U.S. Census Bureau and training data by the Employment and Training Administration, all of these departments now use the Standard Occupational Classification Coding system. No longer will you have to work through different coding schemes and criteria to figure out if you are comparing like occupations from one dataset to another.

Continued on page 3

Continued from page 2

Furthermore, there are more occupations in the new SOC system than in the previous classification structure. Also, the SOC system is set for review so that new and emerging occupations can be easily added into this new structure.

Because of the conversion to the SOC system, however, the ability to make direct comparisons between the current and previous survey data is now limited. Only 374 occupations from the previous coding structure will match the new SOC.

Conclusion

So what can we say about wages in Texas based upon our most recent data? With a state as large as Texas, it cannot be expected to have a

homogenous labor market. Some areas have widely differing employment growth rates. The same can be said of both occupational structure and rates of pay. While the change in coding schemes may limit our ability to view data over time, the same message appears to be coming through: that the more specialized the occupation, the higher the rate of pay. Conversely, those in occupations at the lowest end of skill level (which employ the most Texans) continue to be paid less than the national norms. Though the answer to why this is so is beyond the scope of this survey; it is important to note that the data confirms the disparity's existence.

Highlights of Local Area Unemployment Statistics

(Not Seasonally Adjusted)

The Texas actual series unemployment rate declined by three-tenths of a percentage point from a revised January rate of 4.1 to 3.8 percent in February. This reduction matches the average January-to-February decrease of the past ten years, with the February rate ranking as the lowest historical unemployment rate ever recorded for the month.

The number of employed Texans increased over the month by 20,600 from 9,983,500 in January to 10,004,100 in February. This marks the fourth time in the past five months that the number of employed Texans surpassed the 10 million mark. Gains in both Government and Construction aided over-the-month employment increases. Government's increases are attributed to schools and related businesses preparing for the start of the spring semester, while those in Construction were in response to a return of warmer weather.

The number of unemployed Texans decreased by 33,700 over the month from 430,500 in January to 396,800 in February – which is 70,500 less than last February's level of 467,300. The over-the-month decline of 33,700 is greater than the average January-to-February reduction of 31,800 which has occurred over the past nine years. This is the fewest number of unemployed Texans for the month since 1981.

The number of claims for unemployment benefits without earnings decreased by 1,200 over the month from 103,700 in January to 102,500 in February. This was the second straight month and only the second time in the past thirteen months that continued claims exceeded the 100,000 mark in Texas. This months claims level is 3,000 higher than February of last year.

Transportation, Communications, and Public Utilities (TCPU) and Trade were the only major industries to record an over-the-month increase in claims for unemployment benefits, increasing by 400 and 300 respectively.

to record an over-the-month increase in claims for unemployment benefits, increasing by 400 and 300 respectively. Mining was the only industry to see an over-the-year decrease in claims, while all other industries experienced an average gain of 700 over the year.

*Estimates for the current month are preliminary. All estimates are subject to revision. Estimates reflect actual (not seasonally adjusted) data. Civilian Labor Force (C.L.F.) includes wage and salary workers, self-employed, unpaid family, domestics in private households, agricultural workers, workers involved in labor disputes and the unemployed, all by place of residence. Employment and Unemployment data are first rounded then added together to derive the rounded CLF total. Because of this rounding technique, this rounded total of the CLF may not agree with a rounding of the CLF total itself. Percent Unemployed is based upon unrounded Labor Force, Employment and Unemployment numbers. Estimates of the TWC are in cooperation with the Bureau of Labor Statistics, U.S. Department of Labor.

^{*}Estimates for the current month are preliminary. All estimates are subject to revision. The number of nonagricultural jobs in the MSAs is without reference to place of residence of workers.

**Mining estimates are included in Construction estimates for these MSAs.

Estimates of the TWC are in cooperation with the Bureau of Labor Statistics, U.S. Department of Labor.

Percent Change in Population, 1990 - 2000

What's New

Statewide Local Area Unemployment Statistics (LAUS) data has been revised back to 1998 in the actual and seasonally adjusted series. We now have substate LAUS revisions for 1998 and 1999. There will be no further LAUS revisions until early next year.

Covered Employment and Wages by Industry and County for the third quarter 2000 is now available. This publication contains a statewide summary of employment and total payrolls by industry, county employment by industry and total wages, and statewide and county average weekly wages of workers in covered employment.
