RECORDS OF WATER-LEVEL MEASUREMENTS IN WELLS IN HARRIS COUNTY, TEXAS, 1966-69

INTRODUCTION

This report is the second in a series of reports prepared by the U.S. Geological Survey in cooperation with the Texas Water Development Board and the city of Houston on water-level measurements in Harris County. The first report, *Water-Level Measurements in Observation Wells in Harris County, Texas*, was published by the Texas Water Development Board in 1969 as Report 103¹ and presented all measurements in the county on file in the U.S. Geological Survey offices through the spring of 1966. This subsequent report presents measurements made in 303 wells during the period 1966-69 (Table 1). Although a few new wells have been added to the observation program, for the most part these records represent a continuation of measurements in the same wells as Report 103.

Measurements in most observation wells are made annually, but some measurements are made monthly, quarterly, or semiannually. A continuous measurement record is obtained at five locations where water-stage recorders are installed. If numerous measurements were made during a short period of time, or if water-level data were obtained from a water-stage recorder, representative water levels were selected for publication.

Water levels are referenced to land-surface datum and all measurements are reported in feet below land surface.

Data on the geology, hydrology, pumpage, and chemical quality of ground water in Harris County may be obtained from previous publications, some of which are listed in the selected references of this report.

The water-level data presented in this report were recorded on form sheets by R. K. Gabrysch, C. W. Bonnet, and W. L. Naftel of the U.S. Geological Survey's field office in Houston. The data were subsequently processed in the Electronic Data Processing Division of

the Texas Water Development Board under the direction of Mike Parker, Division Director, Bill Treacy, Commercial Systems Section Head, and James Grissett, Programmer. The tabulations herein are photographic reproductions of direct printouts of the electronic data processing systems.

WELL-NUMBERING SYSTEM

The well-numbering system used in this report was developed by the Texas Water Development Board for use throughout the State. Under this system, each 1-degree quadrangle formed by lines of latitude and longitude is given a number consisting of two digits. These are the first two digits in the well number. Each 1-degree quadrangle is divided into 7½-minute quadrangles which are given 2-digit numbers from 01 to 64. These are the third and fourth digits of the well number. Each 7½-minute quadrangle is divided into 2½-minute quadrangles which are given a single digit number from 1 to 9. This is the fifth digit of the well number. Finally, each well within a 2½-minute quadrangle is given a 2-digit number in the order in which it was inventoried, starting with 01. These are the last two digits of the well number.

On the well-location map (Figure 1), only the last three digits of the well number are shown at each well location; the second two digits are shown in the northwest corner of each 7½-minute quadrangle; and the first two digits are shown by the large block numerals 60, 61, 64, and 65.

In addition to the 7-digit well number, a 2-letter prefix is used to identify the county. The prefix for Harris County is LJ. The prefix is not included in Table 1, because all wells are in Harris County.

Previously published well numbers are also included in Table 1, under the heading "old well number". These provide a means of cross reference to well data in earlier publications.

¹A limited number of copies of Report 103 are currently available from Texas Water Development Board, P.O. Box 13087, Austin, Texas 78711.
