PGCD Elections Cancelled

PGCD Board Approves Management Plan

Blue Legacy Award Winners Announced

The Texas 85th Legislature Regular Session convened on January 10, 2017. General Manager C. E. Williams and staff member Peter Winegeart are tracking over 50 bills relating to groundwater conservation districts. The last day to file a bill was March 10, 2017.

The Texas House of Representatives refers most groundwater bills to the House Committee on Natural Resources. This committee is chaired by Rep. Lyle Larson of San Antonio and holds hearings on Wednesdays. The Senate Committee on Agriculture, Water and Rural Affairs is where most groundwater bills are referred to in the Senate. This committee is chaired by Sen. Charles Perry of Lubbock and conducts its hearings on Mondays. PGCD attends these hearings and will testify on behalf of the District as necessary. The District also spends countless hours personally visiting with many Senate and House members in order to voice opinion on groundwater legislation.

Of the many groundwater bills filed this session, there are a few that have drawn the interest of the District more than others. One such bill is Senate Bill (SB) 1392, filed by Chairman Perry and is an omnibus groundwater bill. Williams has been asked to serve on a stakeholders committee concerning SB 1392 by the Chairman's office. The introduced version of SB 1392 calls for the addition of management requirements for "common reservoirs" and for groundwater districts to adopt common rules for these reservoirs. The bill also makes changes to permitting, fees and taxation, appeals to Desired Future Conditions (DFC) and other processes in the district's management plan along with repealing parts of the Water Code.

House Bill (HB) 31 relates to the permitting process. HB 31 was filed by Chairman Larson and sets requirements for the permit application procedure while aligning export and operation permits. HB 3037 by Rep. Paul Workman of Austin, creates a separate Groundwater Management Area (GMA) and DFC for each major and minor aquifer in the state. Finally, HB 3225 by Rep. Four Price and companion bill SB 726 by Sen. Kel Seliger were filed on behalf of PGCD to officially move the board of directors election to the uniform election date in May of odd number years.

The final day of the 85th Legislative Session is May 29, 2017. Many bills are just now starting the process of becoming law. The next couple of months will be very busy at our state capitol, and PGCD will continue to work in the interest of the District throughout the remainder of the session. Contact the PGCD office for any questions, or go to www.capitol.state.tx.us to track or read any bill filed.

PGCD General Manager, C.E. Williams, addressing the House Natural Resources Committee.

Lawn Sprinkler Gauges Available

The greatest percentage, up to 35 percent, of water we use for non-agricultural use goes to watering our lawns. Your lawn only needs water once to twice a week and less if it rains. Overwatering our lawns can not only be costly and wasteful, but can also cause damage to the roots of healthy grass. Knowing how much to water your lawn will diminish these issues that many face in the summertime and help conserve water.

To help you know how much water your lawn is getting, we recommend that you accurately measure using a lawn gauge provided by Panhandle Groundwater Conservation District, which can be picked up at numerous locations around the district (see right).

Using the Lawn Sprinkler Gauge

- Randomly place sprinkler gauge on your lawn and run the sprinkler for 15 minutes. Record the amount of water collected in the gauge.
- Repeat and take measurements at three or four different locations around the lawn.
- Calculate the average of all measurements and multiply average by four.

This will tell how many inches per hour your sprinkler applies to your lawn; e.g., if your sprinkler waters 1/8 inch in 15 minutes, the hourly rate is 1/2 inch, which is the ideal rate for proper soil absorption.

When to Water

Stress for your lawn is natural, especially during the summer. When your lawn is ready for water, it will have a grayish cast and footprints will remain in the turf. Wait for these signs of stress to appear before watering.

Type of Grass

When choosing what type of grass to plant, it is best to choose a type that is best suited for our area.

- **Best Choice:** Buffalo grass-normally remains green on as little as 1.5 inches of water per month, even during the summer. Due to deep root systems, 2 or 3 soakings a summer may be sufficient.
- **Good Choice:** Bermuda grass-requires about one watering a month during the winter and may require 1 to 2 inches per week during the summer.
- **Not Recommended:** Fescue-this type of grass may require as much as 3 inches a week during the summer and 1 inch per week during the winter.

Upcoming Rainwater Harvesting Workshop

A Rainwater Harvesting Workshop is scheduled for Saturday, May 13 from 9:00 a.m. to noon at the Texas AgriLife A&M Extension Center in Amarillo, 6500 W. Amarillo Blvd.

World renowned rain harvester, Billy Kniffen, retired AgriLife Extension water resource associate from Menard, will be the special guest presenter. Mr. Kniffen will present on a variety of topics including rainwater harvesting systems and irrigation success. Each attendee will leave with their own rain barrel, after building it on location.

Austin Voyles, agriculture and natural resources agent for Potter County Extension Center said space and supplies will be limited, so those planning to attend should RSVP as soon as possible either by calling 806-373-0713 or by emailing him at austin.voyles@ag.tamu.edu. Cost is \$20 for those who RSVP by May 5th, otherwise it will be \$40 at the door.

Also, don't forget about PGCD's Rainwater Harvesting Rebate/Loan Program. We now offer two options for those living within the District installing a system. For complete program details, call the office at 806-883-2501 or visit our website at www.pgcd.us.

Precipitation Enhancement Program

Panhandle Groundwater Conservation District (PGCD) will kick off its seventeenth year of the Precipitation Enhancement Program on April 1 as we move further into spring and our thunderstorm chances begin to increase. Last year's season concluded as one of the busiest since 2010 with a total of 29 seeding days. The first seeding flight occurred on April 16, 2016 and the final flight was on September 13, 2016. The season started off and continued through mid-June with average precipitation chances. Then at the end of July and August the upper level pattern changed to allow shortwaves to regularly move across the Texas Panhandle. This allowed many dynamic features including fronts and trough boundaries to help create lift for convection. In addition to these features, the Panhandle was supplied with continued moisture from either southeasterly flow from the Gulf of Mexico or southwesterly flow which brought tropical moisture from the storms in the Pacific Ocean. The season ended with 38 total seeding flights, 14 reconnaissance flights, 763 glaciogenic flares burned and 80 hygroscopic flares. While drought in recent years has been a concern for the Panhandle this year the majority of the Panhandle remained drought free. Rainfall through the summer for the PGCD counties remained at normal or above for all except during June when several counties saw below average rainfall. The rainfall chart below shows total 2016 rainfall compared to their normal rainfall received.

The 2016 year end assessment done by Dr. Arquimedes Ruiz, Texas Tech University Professor and from Active Influence and Scientific Management, showed that on average the program produced an additional 1.95 inches of rainfall per acre. The cost of the 2016 program was \$184,612.54. Factoring in the cost of the crops, plus the additional amount of rainfall produced the cost of the program was \$0.046 per acre.

Ag Loans Available

Panhandle Groundwater District is accepting loan applications from District producers for center pivot sprinklers, drip irrigation systems, soil moisture probes, and other water saving equipment.

The loan is available to producers at an interest rate of 1.86 percent and an eight year payback term. Approximate funds remaining are \$790,000.

For more information about our ag loan program contact Julie Bennett at the District office at (806) 883-2501.

PGCD Election Cancelled

The election scheduled for May 6, 2017 has been cancelled in accordance with the Texas Election Code, Sec 2.053(a). The following candidates, who will be sworn in by a date yet to be determined, have been certified as unopposed and are hereby elected:

- Phillip Smith - Director, Precinct 1**
- John R. Spearman - Director, Precinct 3**
- Chancy Cruse - Secretary, Precinct 5**
- Bill Breeding - Director, Precinct 7**
- Butch Collard - Director, Precinct 9**

For more information or questions, please call the office at (806) 883-2501.

PGCD Board Approves Management Plan

Panhandle Groundwater Conservation District's Management Plan for 2017-2022 was approved by Board of Directors on February 23, 2017. The plan serves as an overall guide for the District during the next five years, as we continue to work toward our goal of the 50/50 Management Standard.

The plan outlines 10 goals and Desired Future Conditions (DFCs) either outlined by Chapter 36 Water Code, the Texas Water Development Board (TWDB) or by the District itself.

One of the main changes made to the plan concerns the Elaine Aquifer, which has been deemed an irrelevant minor aquifer by TWDB for PGCD's planning purposes. It was deemed irrelevant mainly due to poor water quality and limited pumpage.

To view a copy of the plan, visit www.pgcd.us, and if you have any questions or would like more information, please call the office.

Blue Legacy Award Winners Announced

The Water Conservation Advisory Council announced the winners of the 2017 Blue Legacy Awards in municipal, agricultural, and manufacturing water conservation. On March 23, 2017 the winners were honored during Texas Water Day at the Capitol hosted by the Texas Water Foundation. The winners within each category are:

Agricultural

Leon New, North Plains GCD - non- producer
Hopper Farms Partnership - Harmony Farms, Inc. - producer

Municipal

City of Lago Vista - population less than 10,000
New Braunfels Utilities - population between 10,000 and 50,000
City of Mansfield - population between 50,000 and 100,000

River Authority or Regional Water District

North Texas Municipal Water District

Innovative Projects

Texas Living Waters Project

Blue Legacy Awards are given to those who demonstrate responsible management of water resources and showcase examples of effective water stewardship.

To learn more about this year's winners, visit www.savetexaswater.org or contact Mindy Conyers, council support staff, at mindy.conyers@twdb.texas.gov or (512) 463-5102.
